**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, 14-19, and 27-32; drawn to a computer method, system, or computer software product for calculating a normalization factor between probe arrays, classified in class 702, subclass 19.
- II. Claims 7-13, 20-26, and 33-39; drawn to a computer method, system, or computer software product for comparing gene expression between a first and second sample with the evaluation of a p-value via the Wilcoxon's signed rank test, classified in class 702, subclass 19.

The inventions are distinct, each from the other because:

The inventions of Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different modes of operation regarding the calculation of a p-value as in Group II versus a distinct and different calculation in Group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
